

Realmagine

Realmagine represents our idea of making the world around us a **better place to live**.

Whenever you **see** something that you can **imagine** being something better, more useful or just human again you can **make it real**.

The basic principle of Realmagine is to allow people recreate the world around them. When a Realmaginer **sees** a place that she finds forgotten, messy or just wrong, she takes a video footage of that place to allow Realmagine create a 3D model scene of that place. She can then modify this place with the use of common asset repository and tools to her **imagination** and after she is done, she can publish the end result for everyone to see, evaluate, elaborate and eventually **make real**.

Every other Realmaginer can not only browse for the creations of others on the web, but whenever she passes one such, her mobile device will notify her and thanks to Realmagine she can see it through augmented reality as if it was already there.
