

GPS Children Locator

Ľuboš DEMOVIČ

In rich and developed countries there exist various problems. One of them is the low birth rate of population. Recent certain research held in Germany proved that in the year 2050 its population will be much older and smaller than nowadays. One seventh of people living on the world is living in this group of population.

Busy families occupied with full-time work obligations are having in these countries usually no more than one child and their consideration about having eventually more children resolutely refuse because they can hardly imagine how they would be able to master all of those upcoming responsibilities. With help of our application we are ready to share to our knowledge, creativity and enthusiasm linked with the latest information technologies it is possible to find a useful solution for this common issue of today.

Every child would use a mobile phone which would send its current GPS position. Subsequently the parents on a particular map would immediately see where their descendants are at that time occurring, how they spend their free time, whether they take part in school lessons. In fact, all parents would keep their children under control.

Young people could use in this application the school calendar with important events, for instance information about their school result as well as their attendance, including homework schedules. For desirable activities the children could receive specific bonus points in order to exchange them for pocket money or access to a database of computer games. If a pupil does not bring expecting study result, parents are able to block various activities such as making phone calls. This is an application that will love every modern family.

GPS Children Locator

GPS Children Locator supports upbringing, education and monitoring of children with the assistance of mobile phone with GPS. This is an application that will every modern family love.

- + a mobile phone
- + homework schedules
- + school results
