

Microsoft is looking for talented students to take part in the Internship Program. They will spend 3 months (Summer 2009) in MS Headquarters in Redmond, USA.

Interns will share the same responsibilities as full-time employees in the product groups. Interns will be given real work with tremendous problems to solve and they will be working right alongside full-time employees as part of a team charged with delivering world-class software on schedule. Each intern will be assigned a Mentor throughout the program.

Follow your passion

Realize your potential

careers

Microsoft is looking to fill following intern positions:

Software Design Engineer

Software Design Engineers (SDEs) develop next-generation applications, operating systems, and tools, just to name a few. They write code, construct data structures and algorithms, and work closely with Program Manager to define and prioritize features. It's an opportunity to explore new technical realms and leave a lasting technical legacy.

Software Design Engineer in Test

Software Design Engineer in Test (SDET) puts the product through its paces, walking in the user's shoes. You'll break the product down – including creating the tools such as automation, standalone programs, and device drivers – then work with Software Design Engineers to take the product smoothly to beta stage.

We expect the candidates to be:

- Students at Czech University (3rd or 4th year)
- Skilled programmers (C/C++, C#) with passion for writing code
- Fluent English
- Team players
- Communicative and flexible
- Creative and innovative
- Driven for results
